(a) Photon populations
cavity 1
cavity 2
averaged dilation
$\langle n_i \rangle$
gt
(b) Photon factorial moments
cavity 1
cavity 2
averaged dilation
$\langle n_i(n_i-1) \rangle$
gt
(c) Independent emitter relaxation
$P_{s,1}$, unequal
I_1, unequal
$P_{s,1}$, equal mean
I_1, equal mean
Singlet probability / imbalance
gt
(d) Timestep convergence
sampled: state
symmetric split: state
Error at $gT = 4$
$g\,\Delta t$
